

# Instructions for Capstone Project 1 - Online Resume

## Project Specifications

1. Create an HTML file named `index.html`.
2. Use the `<!DOCTYPE html>` declaration at the beginning of the file to indicate that it's an HTML document.
3. Create a `head` section that includes a `title` element with the text "My Resume".
4. Inside the `body` section, write HTML code to create an online resume covering the following aspects:
  - **Summary** or objective statement
  - **Education** (list degrees, schools, and dates)
  - **Work experience** (list job titles, employers, dates, and responsibilities)
  - **Skills** (list relevant skills or areas of expertise)
  - Awards, certifications, or other achievements (list any relevant awards, certifications, or other accomplishments)

5. Use appropriate HTML tags to format the content of each section, such as `h1` for section headings and `ul` or `ol` for lists.
6. Use HTML tags to add a **profile photo** of yourself.
7. Use relevant anchor tags to create a multi-page website, listing other aspects of your resume such as **Hobbies** and **Contact** details.
8. Add a `footer` element with your name and any copyright information or other disclaimers. (Hint: use the MDN docs for things you don't know how to do: <https://developer.mozilla.org/en-US/docs/Web/HTML/Element/footer>)
9. Save the `index.html` file and open it in a web browser to ensure that it displays correctly.
10. Add your website to your GitHub to start building your portfolio.
11. Publish your website using GitHub pages
